

TXM-5474

Teknim LTE Module

TXM-5474 provides 4G communication support, enabling cloud connection via a SIM card for using Teknim Mobile Application and Teknim Mosaic software. Thanks to the TXM-5474 LTE module, users can access and control Teknim panels at 4G communication speeds from their mobile phones or computers and monitor their systems with instant notifications. It supports all Teknim Addressable Fire Panels, TFP-31XX Conventional Fire Alarm Panels, and TSP-5334 and TSP-5208N Intruder Alarm Panels.

General Features

- Provides connection with the alarm receiving center via LTE or GPRS
- Supports cloud connection to use Teknim Mobile Application and Teknim Mosaic Web (Through the mobile application.)
- SMS notification support in case of fire, alarm, or error events
- Multiple user support for SMS notifications
- Remote arm/disarm through phone call (for Intruder Alarm Systems)
